Questions:

- What happens if users choose “Cancel”?

If users choose "Cancel" in the "Save and Launch" dialog, the action of saving resources and launching will be aborted. This means that any unsaved changes will not be saved, and the process of launching will not proceed. The user will likely remain in the current state of the application and may decide to save and launch later.

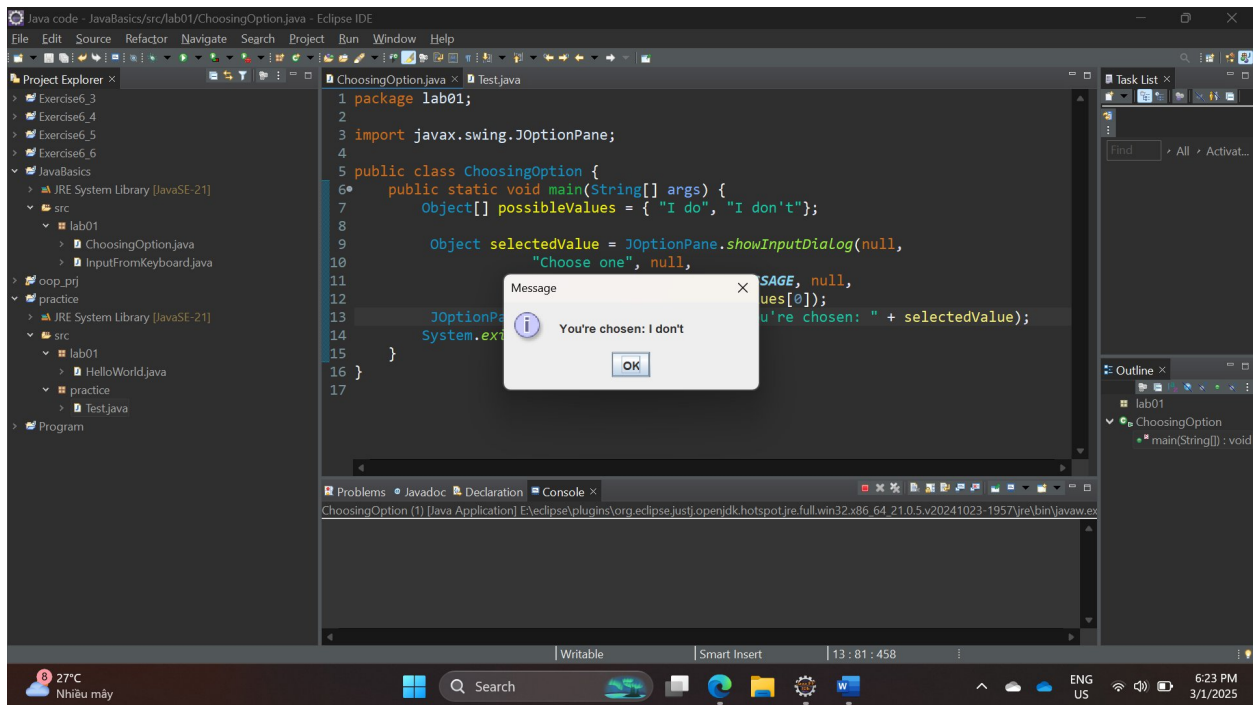

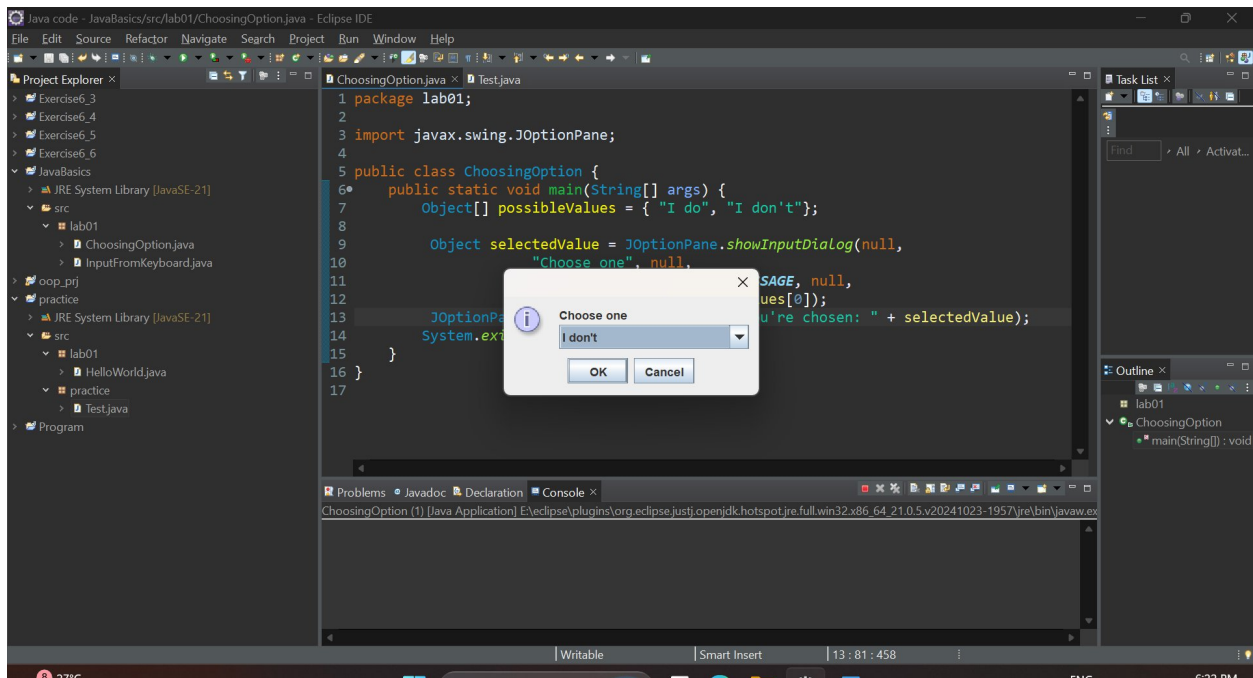

- How to customize the options to users, e.g. only two options: “Yes” and “No”, OR “I do” and “I don’t” (Suggestion: Use Javadocs or using Eclipse/Netbean IDE help).

Case 1:

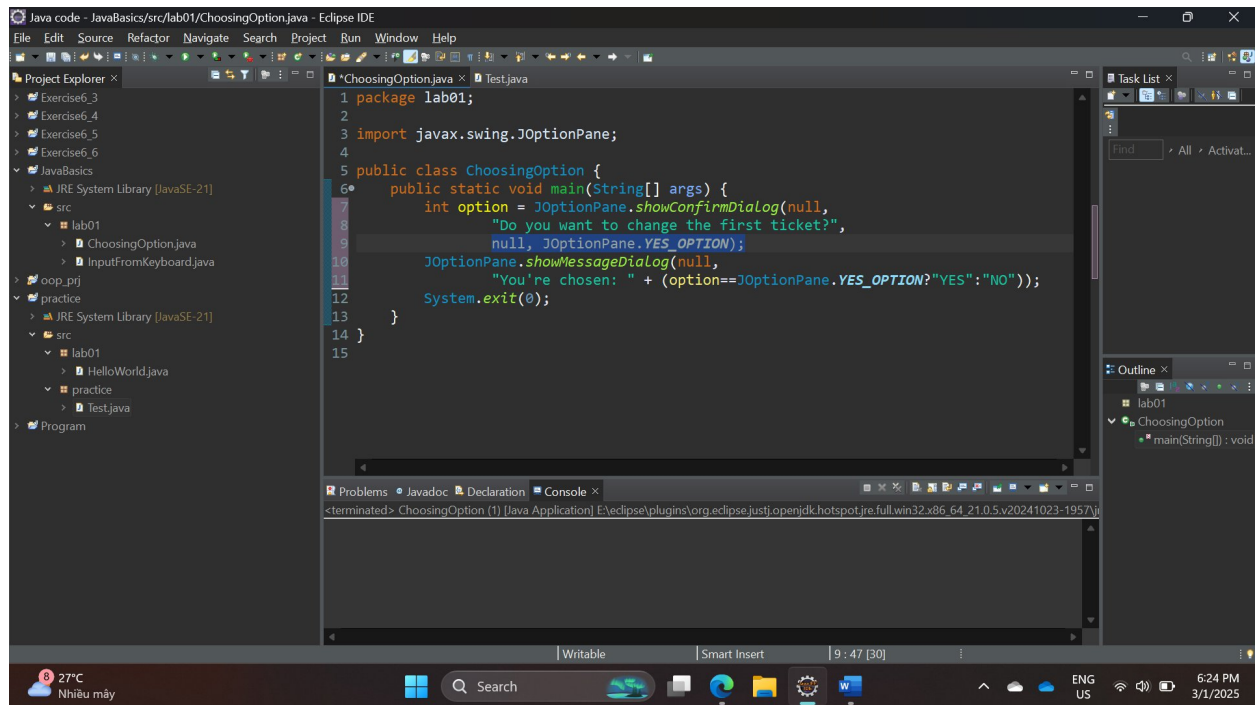

We can change the code as below:

```
1 package lab01;
2
3 import javax.swing.JOptionPane;
4
5 public class ChoosingOption {
6     public static void main(String[] args) {
7         Object[] possibleValues = { "I do", "I don't"};
8
9         Object selectedValue = JOptionPane.showInputDialog(null,
10             "Choose one", null,
11             JOptionPane.INFORMATION_MESSAGE, null,
12             possibleValues, possibleValues[0]);
13         JOptionPane.showMessageDialog(null, "You're chosen: " + selectedValue);
14         System.exit(0);
15     }
16 }
```

Program ask users to choose one of two options which are “I do” and “I don’t”

Case 2:

We add the bold code to the program as above
